Simplified Cloud Migration
& Management

Programmatic Readiness

Agile, Accountable
Business Operations

Personnel Readiness

Spend more time training for the next fight, not in a battle with administrivia. Streamline lifecycle events like onboarding and offboarding across multiple departments with efficient, intelligent services. Use fewer resources to serve more Sailors, Marines, and Contractors by minimizing repetitive tasks with automated workflows that increase productivity and provide full visibility of the entire process.

Supply Readiness

Get equipment back in the hands of our Nation's Warfighters faster and more efficiently. Simplify logistics and proactively get the right parts, on time, to the right locations. Gain visibility into where assets are during transit and track progress by the minute.

Family Readiness

Take care of the Home Front to focus on the Battle Front. Ensure all those who serve our Country—especially their families—have access to exceptional housing and support services. Know that on-base maintenance requests and support services are delivered on time and above expectations.

Systems Readiness

Our Nation's Guardians deserve full mission capable equipment. MRO (Maintenance, Repair, and Overhaul) requires succinct actions powered by efficient workflows and automation to get the fleet ready for action. Gain real-time visibility to the status of MRO tasks, and closely monitor procedures and requirements to get systems operational while managing total cost of ownership.

Infrastructure Readiness

Our Nation depends upon a network that can deliver timely information at the decisive point of action. Simplify the migration to Cloud services and improve visibility of security threats and responses. Proactively identify service outages and automate remediation actions to keep the enterprise operating at the speed of mission.

Programmatic Readiness

Capabilities and requirements are forged for tomorrow's battles but with today's budget. On a single platform, manage the entire project from idea to execution across all technology and business portfolios. Distribute tasks with a thorough understanding of your existing resource workloads. Have seamless insight into the cost and schedule of all capabilities being developed to deliver the best results and value.
