The integration of BeyondTrust Privileged Access Management (PAM) Platform & SailPoint Predictive Identity Platform enables IT organizations to manage user access for privileged and non-privileged accounts, as well as gain full visibility into user and session activity, centralized governance, and more — all using industry standards to reduce implementation time and cost.

Today’s CISOs need to be able to answer:

1. WHO has access to what?
2. SHOULD they have that access?
3. WHAT are they doing with their access?

Identity governance solutions help IT teams answer “who has access to what?” The integrated BeyondTrust and SailPoint solution allows organizations to answer “is that access appropriate for privileged users?” and “is that privileged access being used appropriately?”

Features and Capabilities

Automate Governance Controls
Provide a complete view of an identity’s access and its associated privileged accounts. Governance controls help meet compliance regulations, ensure users who have privileged and non-privileged access avoid elevated access combinations and eliminate over-entitled users.

Streamline Delivery Of Access
Establish centralized administration and control over all privileged and non-privileged accounts from within SailPoint enabling delivery of privileged access based on user role or lifecycle event changes.

Improve Security And Administration Efforts
Out-of-the-box credential cycling enables privileged account management solutions to store and manage SailPoint service account credentials, retrieving them only when performing identity tasks.
Effectively Manage User Access for Privileged & Non-Privileged Accounts

This bi-directional integration provides central management of exactly what PAM entitlements users have, in order to manage accounts & devices throughout an environment. It gives you visibility of Privileged and Non-Privileged activity — all from within SailPoint Predictive Identity platform.

**BUSINESS BENEFITS**

**Complete Import**
- Importing a user provides direct access to the BeyondTrust PAM Platform, providing controlled privileged access and an activity audit. The account and its entitlement access data are fed back to the SailPoint Predictive Identity Platform via API, providing visibility into user access.

**Dynamic Entitlement Export & Reporting**
- All entitlements granted by the BeyondTrust PAM Platform are provided directly to SailPoint via API, providing complete support of out-of-station processes defined in the Predictive Identity Platform by including ad hoc reviews of user access.

**Automated Safe API**
- Direct API-based integration provides immediate provisioning of and visibility into all privileged access. Depending on role membership, users may be granted immediate run time access to request passwords or sessions for privileged accounts and be provided granular least privilege policies.

**Dynamic Activity Audit & Reporting**
- The BeyondTrust PAM Platform provides complete visibility and control of privileged access and extensive reporting, allowing organizations to effectively answer: Is that access being used appropriately?

The SCIM API in the BeyondTrust PAM Platform enables organizations to automate the exchange of identity data, including:
- Add/remove users – admin or non-admin
- Add/remove users to/from groups
- View smart group permissions for a group
- View managed accounts

The API ensures that organizations can successfully track and manage identity changes in cloud environments.

BeyondTrust is the worldwide leader in Privileged Access Management, offering the most seamless approach to preventing privilege-related breaches. Our extensible platform empowers organizations to easily scale privilege security as threats evolve across endpoint, server, cloud, DevOps, and network device environments. We are trusted by 20,000 customers.
